We would like to invite you to the 8th International Symposium on Ultrafast Photonic Technologies (ISUPT2017).

ISUPT is intended to provide a forum for researchers and students working on ultrafast photonic technologies including ultrahigh-speed optical communication, optical metrology, lasers, bio-medical technology, and advanced measurement technologies.

Plenary Speakers
- Prof Tobias Kippenberg – EPFL, Switzerland
- Dr Peter Winzer – Nokia Bell Laboratory, US

Invited Speakers include
- Prof Ben Eggleton – The University of Sydney, Australia
- Prof Franz Kartner – DESY Hamburg, Germany
- Prof Christian Koos – Karlsruhe Institute of Technology, Germany
- Prof Yutaka Miyamoto – NTT, Japan
- Prof Masataka Nakazawa – Tohoku University, Japan
- Prof Leif Katsuo Oxenløwe – Technical University of Denmark
- Prof Stojan Radic – UC San Diego, US
- Prof Siddartha Ramachandran – Boston University, US
- Prof Sergei Turitsyn – Aston Institute of Photonics Technologies, UK
- Prof Dimitra Simeonidou – University of Bristol, UK
- Prof Frank Wise – Cornell University, US
- Prof S.J. Ben Yoo – University of California, Davis

The latest advances in ultrafast photonics will be presented, with a particular emphasis on optical communications. Future directions for research and development will be discussed among leaders in the field. There will also be poster sessions for students and early-career researchers wishing to present their work during the course of the meeting.

Students and early-career researchers interested in presenting a poster should send a proposed title and 35 word abstract to ISUPT2017@soton.ac.uk by 31 March 2017.
